

How to stop melting of the ice

Material:

- salt - sodium chloride,

- ice cubes,
- plate

Instruction:

Freeze water into ice in the molds. Then place ice cube in plate. When the ice starts to melt so as to sprinkle salt on 33g attributed to salt 100 g of ice.

Explanation:

When the snow or ice sprinkle with salt, obtain a liquid solution having a temperature below 0 $^{\circ}$ C, depending on the concentration of the solution. The lowest temperature of -21.5 $^{\circ}$ C when the ratio of ice and salt is 3:1.
