

One of the most popular experiment.

Material:

- basparsodaid. Instruction:

To the glass with vinegar and dishwashing liquid pour soda. Now violent reaction begins.

Solution is foaming now.

Explanation:

It is deceptively simple: what appears to be one reaction is actually two, happening in quick succession. This reaction is an example of a multi-step reaction.

CH₃COOH + NaHCO₃ -> H₂O + NaOCOCH₃ + CO₂
