

Scared Pepper

Montag, den 01. Oktober 2012 um 12:44 Uhr

Cohesion is the word for this strange force.

Material:

- pepper,
- cup,
- water,
- dish soap.

Instruction:

We all know how glue or tape can be used to stick two objects together. Cohesion occurs on common everyday objects, for example rain to a car's windows or chewing gum on your clothes.

1. Fill a dish with water.
2. Sprinkle some pepper on top of the water.

3. Drop several drops of dishwashing detergent in the center of the water.

Scared Pepper

Montag, den 01. Oktober 2012 um 12:44 Uhr

What happens to the pepper?

Explanation:

The pepper stays scattered all about the water. Water is pulling on the pepper evenly from all directions. When you drop the detergent into the water, it reduces the cohesiveness between the water and the pepper. (It reduces the pulling action on the pepper and the pepper appears to run away from the detergent).

Scared Pepper

pepper is a small, round, green pepper. It is a type of pepper that is often used in cooking. The shadow of the pepper is cast onto the plate, creating a dark, star-shaped pattern. The plate is yellow with a floral border. The background is a light-colored, textured surface.
