

Welcome to **physicsbook.gr**!

Our team consists of young people aged 18-25 years, who are part of the **European** project "[youth in action](#)".

We are

volunteers

from all over Europe, working for the

non-profit

organization

[Experimental TES on Chios Island](#)

. Our goal is to provide educational content for free

on the internet. One of many websites is physicsbook.gr, which is our "science-website". We publish

articles

,
instructions

,
animations

,
videos

and

pictures

of experiments for young people, who are interested in

science

.

It is a great chance to combine the children's wish to explore effects of our everyday life and the teacher's and parents' wish to make their children learn more about topics like **biology**, **physics**

s and
chemistry

.

Of course none of the experiments on physicsbook.gr contain dangerous instructions. Our aim is to give also young children the chance to do experiments: **learning by doing**.

We also try to explain effects by using animations and videos to show and explain more complex experiments.

At last, we wish you a lot of fun with our website and thank you very much for visiting!

Your physicsbook.gr-Team.
