What is Wiki

In order to explain our [experiments](#) scientifically correct, it is necessary to use some **scientific terms**

We are aware that not every child knows the meaning of these terms. Therefore we explain them in

[Wik](#)

i. Also if you know the term, you can look it up to gain new knowledge or maybe more **detailed information**

about

scientific terms

Every term, which is used in experiment **descriptions** or **explanations** is linked with [Wiki](#) i. Also the

[Wiki](#)

articles are linked if we use scientific phrases to describe the term adequate.

How to use Wiki

[Wiki](#) is created to use it in two different ways.

The first way is, to use [Wiki](#) i to complement the experiment articles. Read along the experiment articles and if you do not know a particular phrase, look it up. Also if you search for more detailed information of terms, you already know, use the [Wiki](#) directory.

The second way, to use [Wiki](#) , is to **search** for **scientific phrases and terms**. If you find an article about this term, you can be sure of finding an experiment, which belongs to this term.
